Yapı Teknik Proje Consulting & Engineering is an internationally renowned structural engineering firm which provides services to architects, developers, contractors, and owners. Backed by design partners with over 25 years of cumulative experience, the company has a long tradition of innovative, responsible, and constructible solutions to structural challenges through a hands-on detail-oriented work standard.

A pioneer in the design of skyscrapers, Yapı Teknik has an equally extensive history in projects which range from multi-block developments to smaller renovations, and represent the full-spectrum of building types, notably: offices, retail stores, hotels, residences, laboratories, hospitals, health science facilities, mixed-use towers, sports and entertainment complexes, airport terminals, and cultural centers. The firm, as well, meets clients' needs through peer reviews, structural audits, investigations, and technical research.
